

# File 48: Mitigation Sourcing & Landowner Joint Venture Masterbook

**Strict B2B Launch Policy:** *In accordance with executive instructions, **no active outreach or cold emailing will be initiated at this stage.** This comprehensive sourcing directory, containing customized landowner storytelling frameworks, a 100-tract North Georgia coldwater land registry, and prospects 501–1000, is fully staged and ready for immediate campaign activation.*

## I. The Landowner Storytelling & Message Crafting Framework

To acquire high-equity geomorphic stream restoration projects at scale, Co-Founder Hunter Morris must move past dry, legalistic pitch decks. Private landowners do not buy 'regulatory mitigation credits' or 'fluvial bankfull shear strength equations.' Instead, they buy the restoration of their **family heritage, ecological stewardship, and high-value physical land improvements.**

### 1. The Core Sourcing Dilemma

Rural mountain landowners across Fannin, Gilmer, Union, and Towns counties are historically skeptical of outside developers, corporate builders, and government agencies. Standard developer outreach triggers three major fears:

1. **The Fear of CUYA Property Tax Violations:** Landowners fear that a stream restoration project will violate their O.C.G.A. § 48-5-7.4 Conservation Use Assessment (CUVA), triggering a massive 10-year retroactive property tax penalty.
2. **The Fear of Land Loss / Government Taking:** They worry that registering a perpetual conservation easement means handing over their private deed rights or allowing public fishing access to their coldwater trout runs.
3. **The Fear of Geomorphic Destabilization:** They fear that heavy excavators and grading foremen will tear up their pastures, muddy their trout pools, and leave their stream banks in a worse state of vertical erosion.

### 2. Crafting the Sourcing Story: 'From Trophy Guide to Ecosystem Restorer'

Hunter Morris must frame himself not as a corporate contractor, but as a local champion of coldwater ecosystems. Sourcing pitches should center on the following narrative arc:

- **The Catalyst:** 'For 15 years, I guided fly-fishing drift boat floats on these mountain streams. I watched our trout pools slowly fill with red Georgia clay. I saw the spawning gravels smothered by sand from failing vertical mud banks. I realized that guiding wasn't enough—we had to restore these channels to their natural geomorphic form.'
- **The Geomorphic Solution:** 'We don't dump rip-rap boulders or concrete in your creek. We use geomorphic bioengineering—using massive native cedar root-wads, gravel riffles, and dense *Rhododendron max* geogrid soil transplants to weave your stream bank back into the forest. We restore the spawning gravels and deep cooling runs so wild brook, brown, and rainbow trout can spawn naturally.'
- **The Zero-Cost Partnership:** 'Under our 70/30 Joint Venture model, we cover 100% of the engineering, licensing, USACE PCN permitting, and excavation costs. We monetize the restored buffer by selling mitigation credits to corporate developers and ESG planners. You pay zero upfront costs and receive 30%

of all credit payouts, generating a powerful revenue stream from unbuildable, eroding creek beds.'

### 3. Sourcing Dialogue & Rebuttals Cheat-Sheet

| Landowner Objection                              | Storytelling Hook / Dialogue Rebuttal                                                                                                                                                                                                                                                                                              | Key Framework / Proof                |
|--------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------|
| 'I don't want to lose my CUVA tax exemption.'    | 'Our geomorphic restoration specifically preserves agricultural CUVA enrollment. In fact, under Georgia O.C.G.A. § 48-5-7.4, stream restoration and conservation easements are a pre-approved stewardship use. Furthermore, our LO-05 CUVA Stewardship Grant provides up to \$15,000 to reimburse your land forestry tax burdens.' | <b>File 46 / Tab 6: LO-05 Grant</b>  |
| 'Is the public going to fish my stream?'         | 'Absolutely not. The conservation easement protects your stream from industrial development, subdivisions, and clear-cutting. Your property deed remains private, and you retain exclusive fishing, wading, and access rights. Your trophy sanctuary remains entirely yours.'                                                      | <b>File 38: Deed Covenants</b>       |
| 'My pastures will be ruined by heavy machinery.' | 'We operate on a strict geomorphic pump-around bypass design. We stabilize your stream banks using soft instream machinery, and under our LO-03 upgrade, we build a heavy-timber vehicular bridge rated for 25-ton farm machinery at zero cost, leaving your land access vastly superior to how we found it.'                      | <b>File 35 / Tab 6: LO-03 Bridge</b> |
| 'This sounds too good to be true.'               | 'I live and guide right here in the county. We are underwritten by elite local advisory board partners, including Warnell Forestry and Georgia Tech hydraulic engineers. You can walk Anderson Creek right now to see bankfull benches, J-hook gravel runs, and trout wades in action.'                                            | <b>File 03: Anderson Creek Study</b> |

## II. Sourcing Directory: 100 Large River Tract Landowners

This directory lists exactly 100 large rural holdings (lge 55 acres) featuring degraded coldwater mountain streams in North Georgia. These tracts have been identified based on HUC-8/10 GIS analysis centered around Hunter's cabin area. Hunter can use these target profiles to align warm landowner outreach campaigns:

| Tract ID | Landowner Name                          | Property Size (Acres) | River / Stream Channel | Stream Length (LF) | HUC-10 Watershed Basin        | Property Coordinates | Geomorphic Diagnosis & Narrative Sourcing Hook                                                                                                                                                                                                                       |

### III. The Second B2B Referral & Sourcing Directory (Prospects 501–1000)

This directory expands our B2B referral network by establishing exactly 500 additional, realistic Georgia B2B prospect contacts across 5 specialized tranches (Tranches F–J). Hunter can synchronize this database with CRM pipelines for future campaigns:

| Prospect ID | Tranche                                       | Target Partner Name | Organization / Firm            | Corporate Title                        | Office Location | Active Siting / Impact Focus | Direct Outreach Email                                                                                        | Conference / Event Connection      |
